PROFESSIONAL SUMMARY

CCNA-certified professional with 4 years of hands-on experience across federal, enterprise, and MSP environments. Proven track record supporting mission-critical infrastructure, resolving complex network incidents, and maintaining high first-contact resolution rates in SLA-driven operations. Skilled in network monitoring, fault isolation, and infrastructure administration across LAN/WAN, routing protocols, firewall policy, and cloud networking. Actively transitioning into a NOC Technician or Network Administrator/Engineer role, with lab-proven skills in OSPF, Zero-Trust segmentation, IDS/IPS deployment, and Azure hybrid networking.

TECHNICAL SKILLS

Networking: TCP/IP, VLANs, Inter-VLAN Routing, Subnetting, DHCP, DNS, NAT/PAT, LAN/WAN

Routing & Switching: Cisco IOS, OSPF (Multi-Area), HSRP, STP, Trunking, Layer 2/3 Troubleshooting

Network Security: pfSense, Firewall Policy, Zero-Trust Segmentation, DMZ, IDS/IPS (Suricata), Port Forwarding

Cloud Networking: Azure VNet, Subnets, NSGs, RBAC, Microsoft Entra ID (Azure AD), AZ-104

Systems & IAM: Windows Server, Active Directory, Group Policy, Microsoft 365, MFA, Identity Management

Monitoring & Tools: Packet Analysis, Log Analysis, ServiceNow, ConnectWise, Azure Portal, Incident Triage

WORK EXPERIENCE

IT Support Technician | SAIC — Contracted to Federal Aviation Administration (FAA) *2024 – Present*

- Provide Tier 1/2 network and systems support in a high-volume, SLA-driven federal environment, consistently maintaining 90–95% first-contact resolution across 100+ weekly tickets.
- Diagnose and resolve DNS, DHCP, VPN, and MFA connectivity incidents, minimizing user downtime and escalations in a mission-critical infrastructure environment.
- Support Microsoft 365, Microsoft Entra ID (Azure AD), and Windows environments — handling account provisioning, access issues, and endpoint troubleshooting.
- Perform structured incident triage and documentation in alignment with federal IT operations standards and change management procedures.

Systems Engineer | National Networks LLC *2023 – 2024*

- Administered and supported 40+ multi-site client networks serving 500+ users in a managed service provider environment, handling escalations across DNS, DHCP, VPN, and general connectivity issues.
- Assisted with firewall rule updates, network segmentation changes, and endpoint infrastructure troubleshooting across diverse client environments.
- Developed internal documentation for recurring issues and resolution workflows, reducing repeat escalations and improving team efficiency.

IT Help Desk Technician | Stuller Inc. *2022 – 2023*

- Delivered Tier 1/2 technical support to 1,000+ enterprise users across manufacturing and e-commerce operations, maintaining 95%+ customer satisfaction.
- Managed full Active Directory account lifecycle — provisioning, deprovisioning, and access control changes — ensuring proper IAM hygiene across a large user base.
- Performed workstation imaging, deployment, and hardware/software support across Windows enterprise environments.

NETWORK ENGINEERING PROJECTS

Enterprise Campus Routing & Redundancy Lab

- Designed and deployed a hierarchical campus topology following the core/distribution/access model, with multi-VLAN segmentation and Layer 3 inter-VLAN routing.
- Implemented multi-area OSPF with Area 0 backbone and ABR design: applied route summarization and prefix filtering at the distribution layer to optimize LSDB and control advertisement boundaries.
- Deployed HSRP for first-hop redundancy with priority and preemption tuning; validated gateway failover and measured convergence time under simulated device failure scenarios.
- Performed structured Layer 2/3 troubleshooting of OSPF adjacency failures and routing inconsistencies using systematic fault isolation methodology.

Zero-Trust Enterprise Firewall & Network Segmentation Lab

- Engineered a segmented enterprise network with isolated User, Server, DMZ, and Management zones, enforcing east-west Zero-Trust isolation through explicit inter-VLAN deny policies.
- Deployed IIS web server in DMZ with HTTPS published via controlled NAT port forwarding; restricted server egress to HTTP/HTTPS only to mitigate reverse shell and beaconing risk.
- Configured Suricata IDS/IPS with Emerging Threats Open ruleset and scoped HOME_NET definition for accurate alerting and intrusion detection.
- Simulated adversarial reconnaissance using Kali Linux to validate firewall enforcement, confirm lateral movement containment, and verify alert logging under real attack conditions.

Azure Hybrid Networking Lab

- Designed an Azure VNet with segmented subnets and enforced east-west traffic control using Network Security Groups (NSGs); validated filtering and role separation between deployed VMs.
- Implemented RBAC aligned to least privilege principles across the Azure environment; simulated hybrid connectivity scenarios between on-premises infrastructure and Azure cloud.

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA)
- CompTIA Security+
- CompTIA Network+
- CompTIA A+
- Microsoft Azure Administrator (AZ-104) *(In Progress)*
